# 1. Project Overview

Linlin XU

# Project Overview

- **Scientific Question:**

The relationship between the total screen time (including for study, entertainment and socializing) students spending on electronic devices each day and their sleep quality.

- **Potential Audiences of interest:**

- a) Students;
- b) Teachers & Guardians;
- c) App Developers.

# Project Overview

- **Research Significance:**

For individual students: providing a scientific basis for self-management

For education & guardianship: informing scientific intervention and advocacy

For product design: guiding responsible technology development

**Core Value: contribute data-driven insights towards building a more health-conscious digital society**

# Project Overview

- **Datasets to Use:**

a) Arsalan Jamal (2024). Student Sleep Patterns, Version 1, from

<https://www.kaggle.com/datasets/arsalanjamal002/student-sleep-patterns/data>

b) Aryan Kumar (2025, April), Student Habits and Academic Performance Dataset, from

<https://www.kaggle.com/datasets/aryan208/student-habits-and-academic-performance-dataset>

- **R Packages :**

tidyverse, dplyr, ggplot2, tidyr, reader, purrr, stringr, forcats, lubridate, MASS, moments, pROC, broom, cluster, ClusterR, Rtsne, uwot, gridExtra, corrplot, RColorBrewer, fmsb, reshape2, Matrix.

# Project Overview

- **Conclusions:**

- a) Screen time has no significant impact on students' sleep quality;**

Despite substantial variations in screen time across groups, average sleep duration remained stable at around 7 hours with minimal fluctuation. Both Pearson and Spearman correlation coefficients were close to zero and statistically non-significant.

- b) Sleep quality demonstrates strong stability and is primarily regulated by the complex interplay of multiple factors.**

## 2. Relationship analysis of 80000-dataset

Yutong ZHANG

# Data Distribution & Basic Characteristics

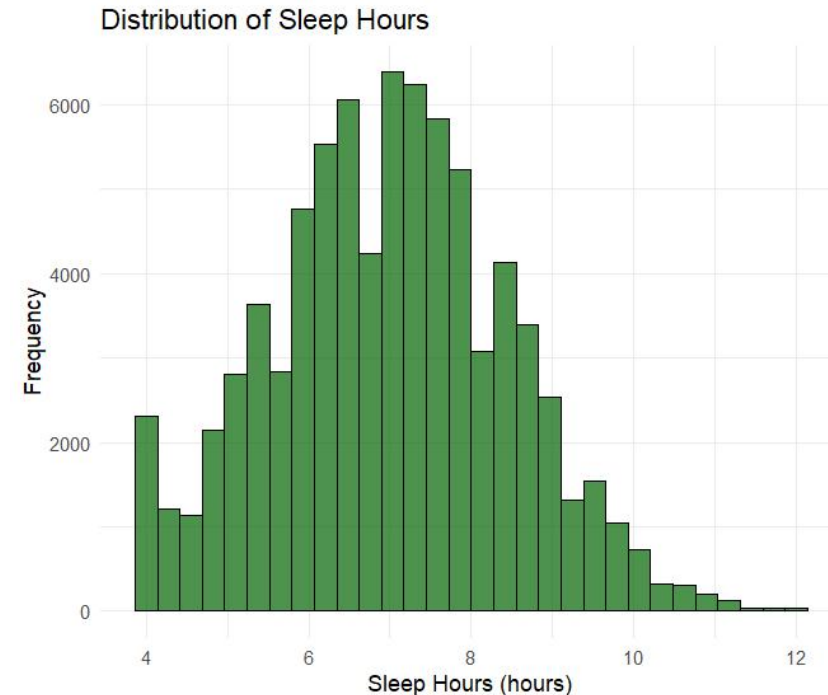

**Fig.1 Distribution of Screen Time**

Mean: 9.6 hours/day

Range: 0.3 - 19.8 hours

Relatively concentrated distribution

Standard Deviation: 2.7 hours

**Fig.2 Distribution of Sleep Hours**

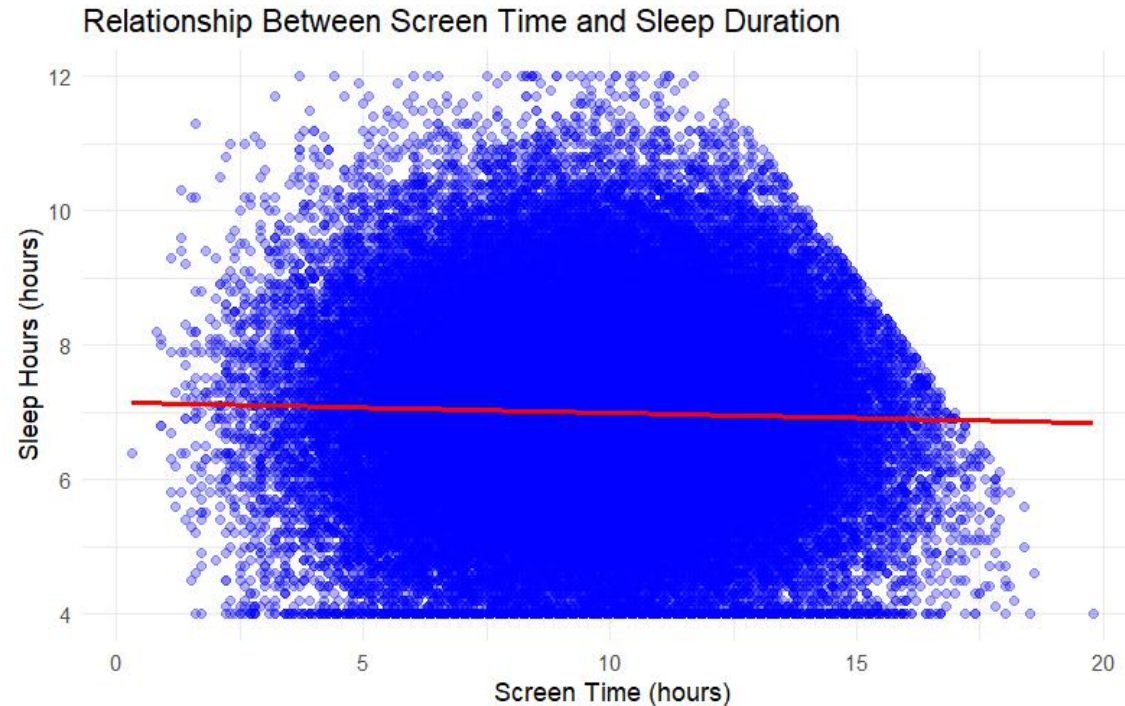

Mean: 7.0 hours/day

Range: 4 - 12 hours

Relatively stable distribution

Standard Deviation: 1.5 hours

# Variable Relationship & Group Analysis

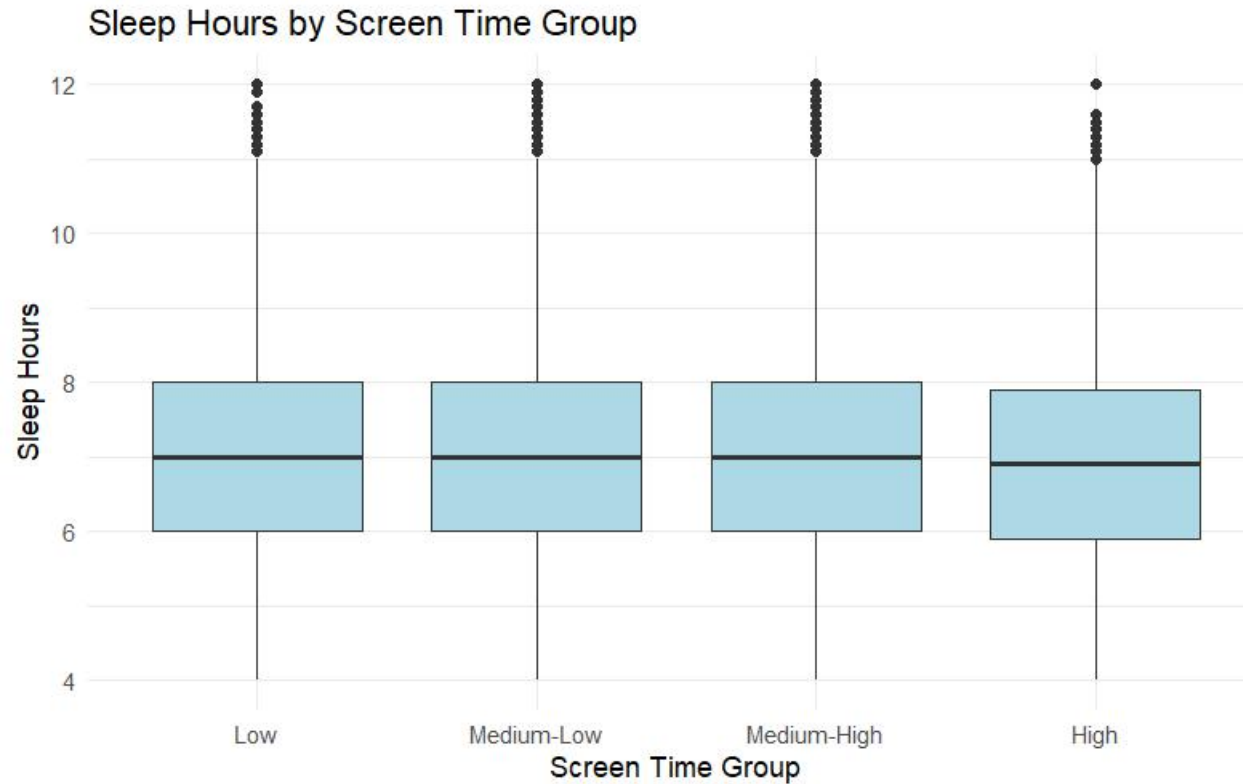

**Fig.3 Relationship Between Screen Time and Sleep Duration**

Pearson Correlation Coefficient: -0.029

p-value: < 0.001

**Conclusion:** Very weak negative correlation

# Variable Relationship & Group Analysis

**Fig.4 Sleep Hours by Screen Time Group**

**Conclusion:** The average sleep durations across different screen-time groups are highly similar.

# Research Conclusions & Implications

- **Negligible Practical Impact**

Only a statistically significant but practically very weak association exists between screen time and sleep duration.

- **Sleep Duration Shows Remarkable Stability**

Even as screen time more than doubled from the lowest to the highest usage group (6.1h → 13.1h), average sleep duration remained anchored around 7 hours, with a negligible maximum fluctuation of just 0.09 hours ( $\approx$  5 minutes).

- **Other Factors Are Likely Dominant**

Sleep duration appears to be primarily governed by factors other than screen time (e.g., circadian rhythms, academic stress, daily routines).

# 3. Validation of the 500-dataset

Xueqin SHU

# Validation of the 500-dataset

The dataset contains 500 rows (students) and 14 columns. Each row represents a unique student, and the columns describe their attributes and sleep-related information.

- **I. check and delete the NA ( missing counts is 0)**
- **II. check and delete outliers**

Rules: Screen Time > 20 hours/day; Study Hours > 20 hours/day; Sleep Quality < 1 或 > 10( each category has 0 outliers)

- **III. combine study time and screen time**

Study\_Hours: Average number of hours spent studying per day (float).

Screen\_Time: Average number of hours spent on screens (excluding studying) per day (float).

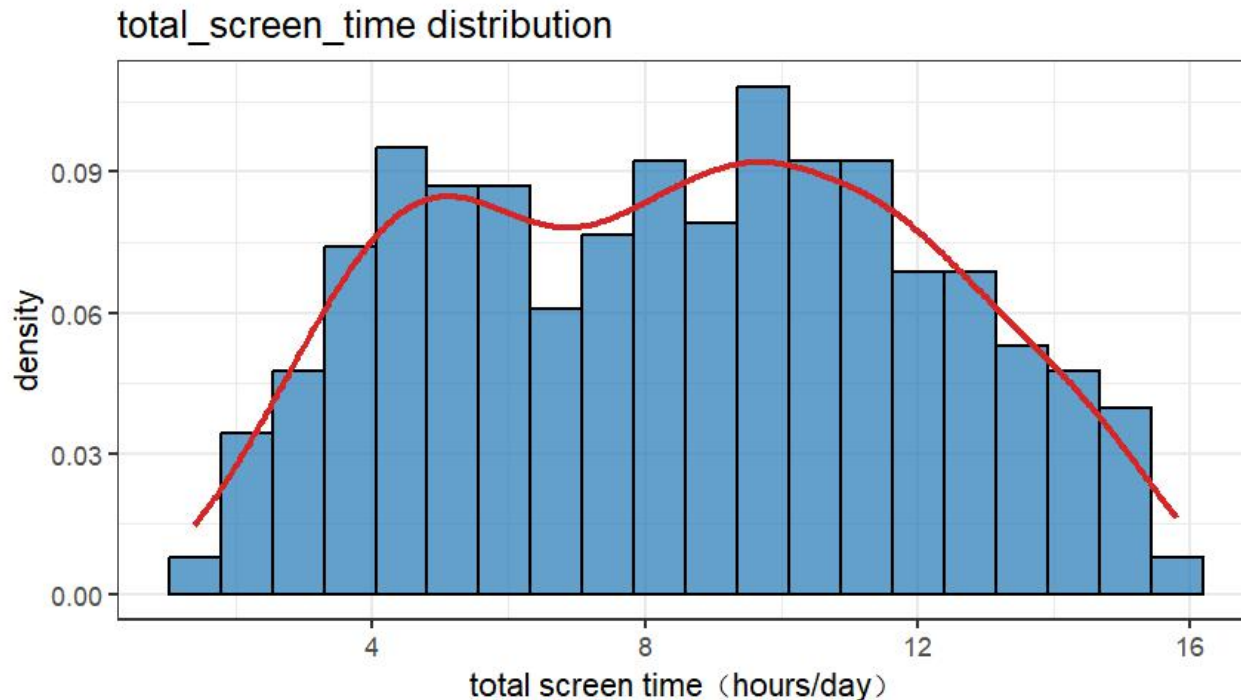

- **IV.I check the original data type(sleep quality: integer; total screen time: numeric)**
- **IV.II check the range of values for sleep quality( they are 1-10 )**

- **V.I descriptive statistics of total screen time**

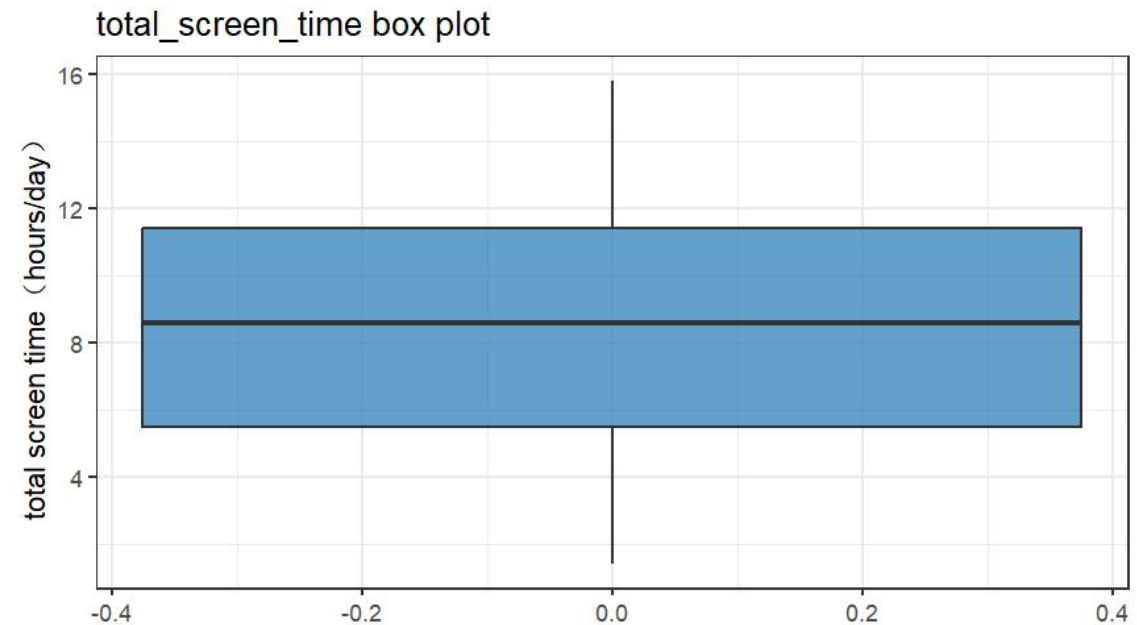

Standard deviation:3.55

Skewness: 0.03 (0=symmetric)

Kurtosis:1.99(3=normal distribution)

**Fig.5 Total Screen Time Distribution**

**Fig.6 Total Screen Time Box Plot**

## • V.II descriptive statistics of Sleep Quality

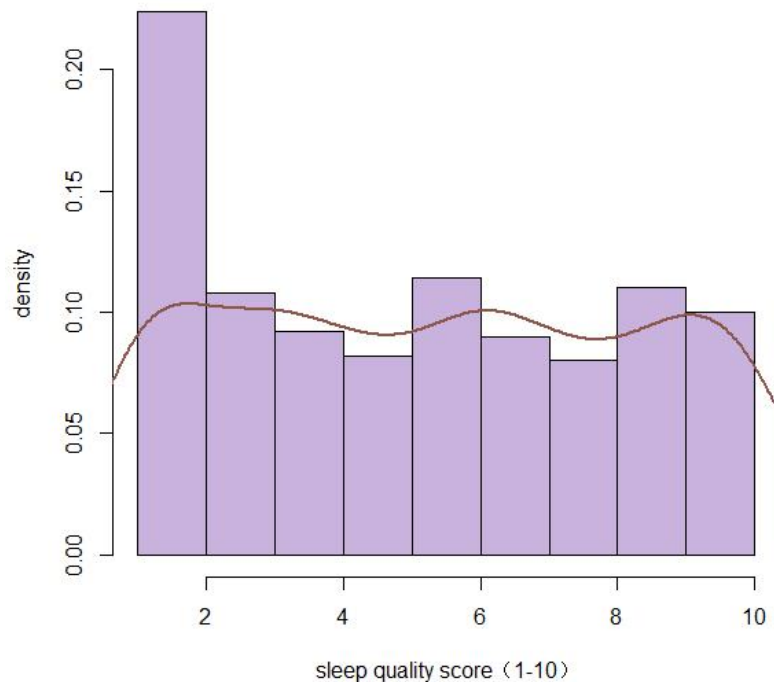

Mean:5.362

Standard deviation:2.97

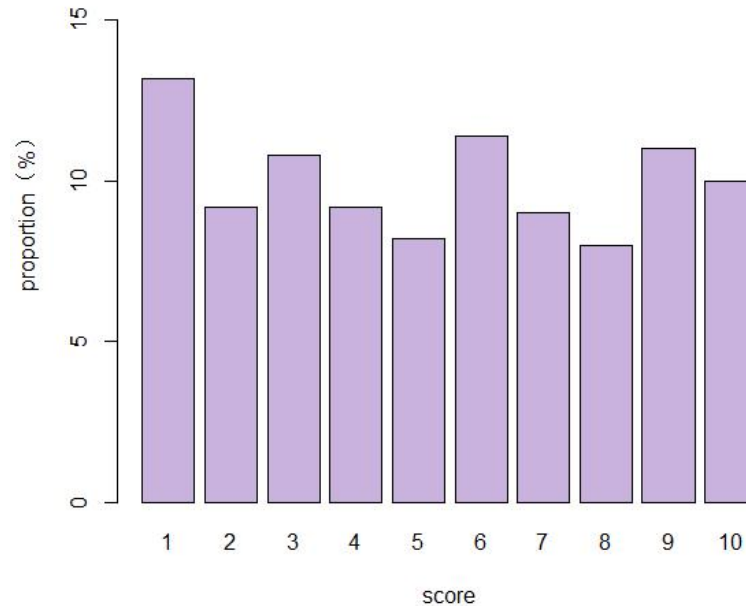

Skewness:0.04(0=symmetric)

Kurtosis:1.73(3=normal distribution)

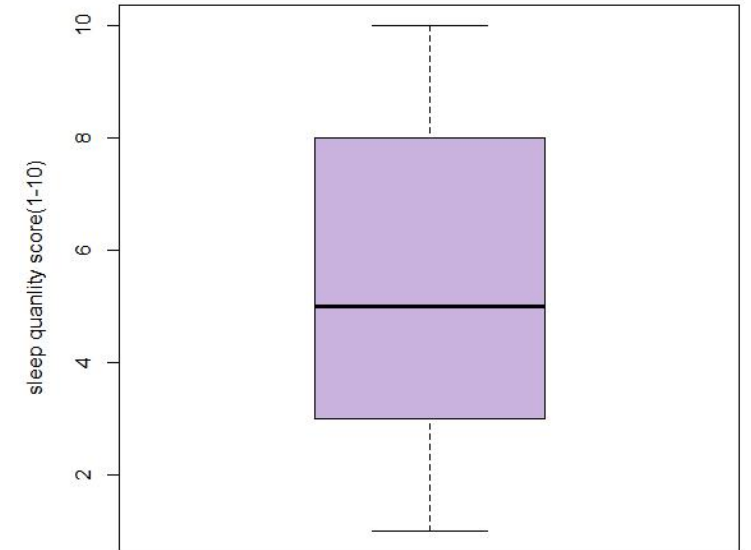

**Fig.7** Sleep\_Quality distribution histogram

**Fig.8** Sleep\_Quality score proportion

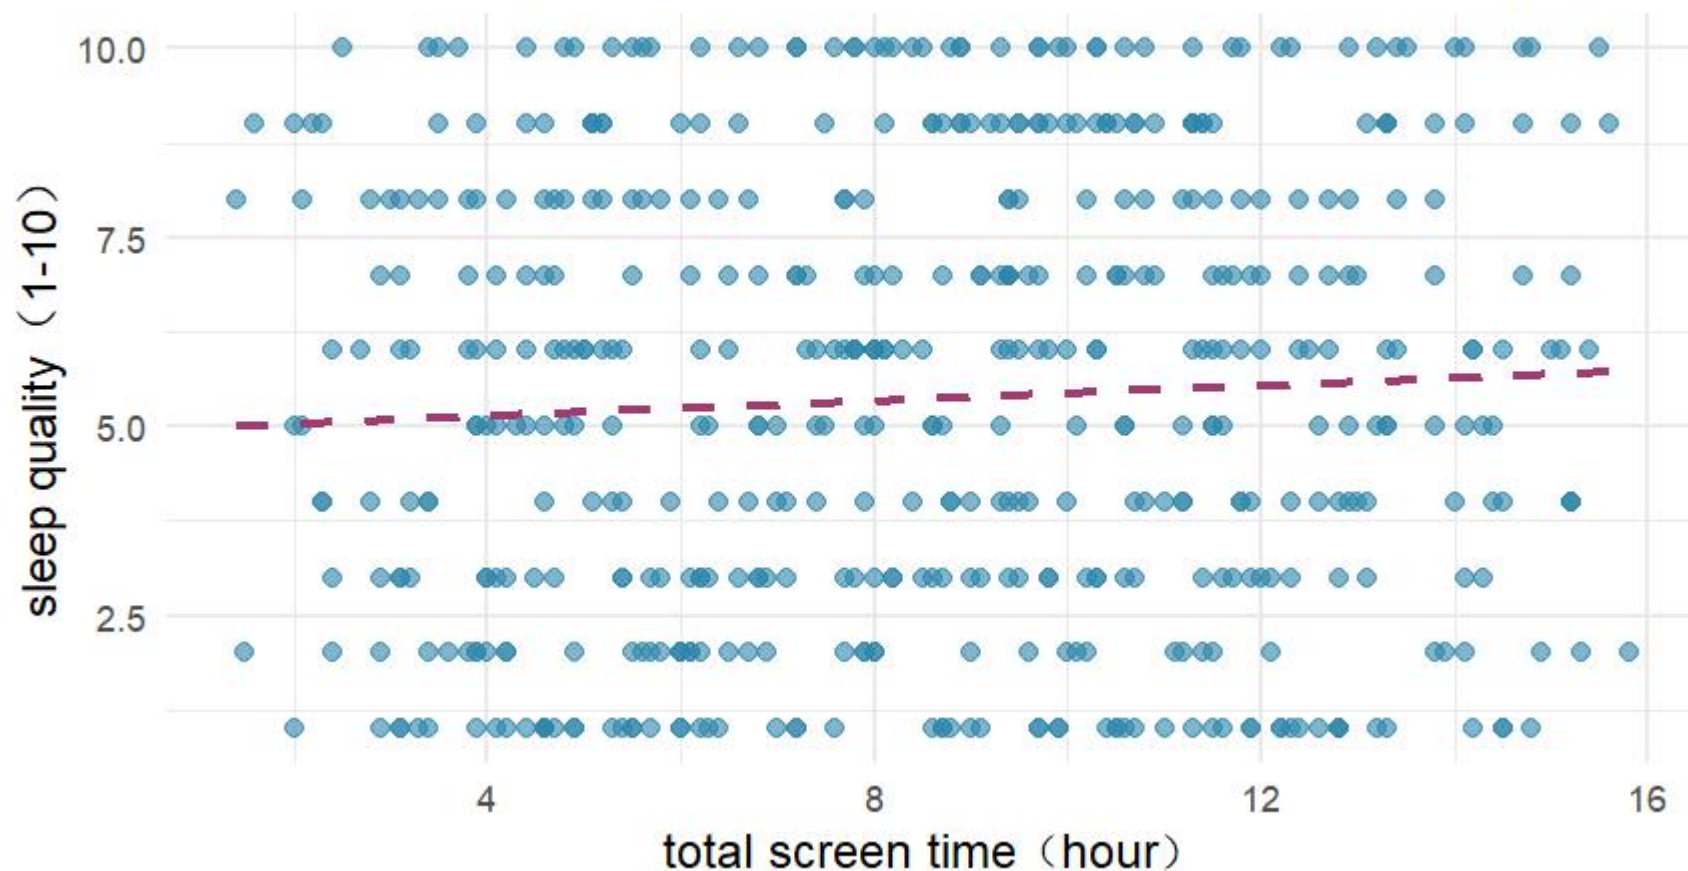

**Fig.9** Sleep\_Quality box plot

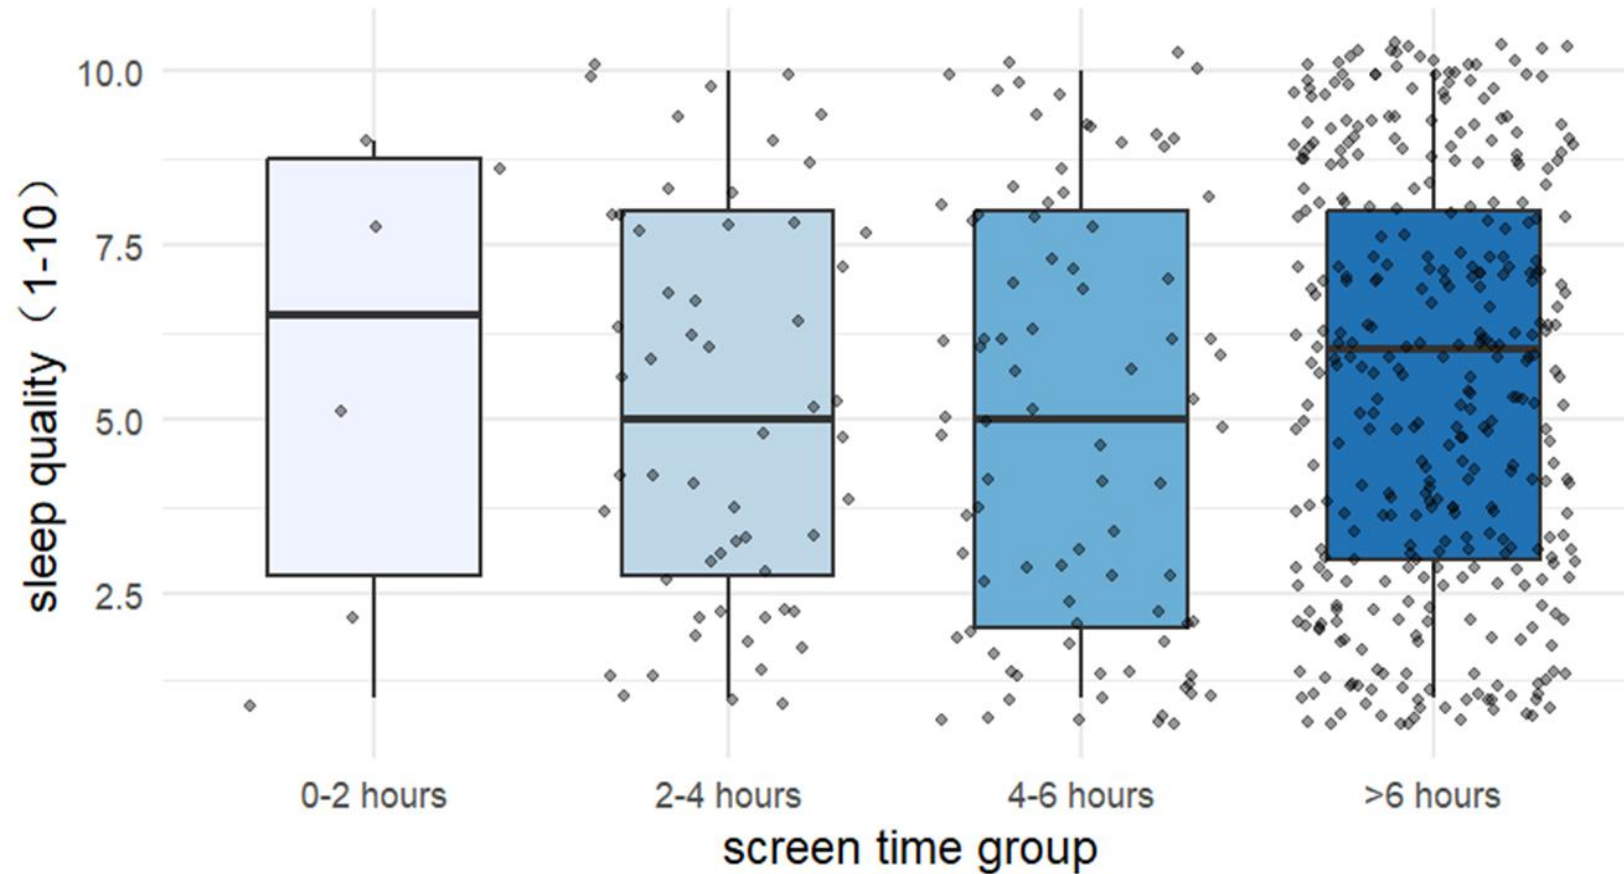

- VI.I draw scatter plot

**Fig.10** the relationship between total screen time and sleep quality

- VI.II draw box plot

**Fig.11** Distribution of sleep quality across different total screen time gr

- **VII.I Pearson**

correlation coefficient: -0.0268 (linear relationship)

p value: 0.5505( $p \geq 0.05$ ), not significant

Correlation intensity: weak

- **VII.II Spearman**

correlation coefficient: -0.0262 (monotonic relationship)

p value: 0.5585(  $p \geq 0.05$ ), not significant

Correlation intensity: weak

**Core conclusion:**

No significant correlation was detected between total screen time and sleep quality ( $p \geq 0.05$ )

# 4. Regression analysis on 500-dataset

Shengpeng RAO

# Categorical Data Visualization & Transformation

1. Details on transformation
2. The reason for transformation
3. The reason for model selection

# Logistic Regression & Interpretation

```
call:
glm(formula = SQ_binary ~ Study_Hours + Gender_Female, family = binomial,
    data = sleep_n)
```

Coefficients:

	Estimate	Std. Error	z value	Pr(> z )
(Intercept)	-0.26101	0.20302	-1.286	0.1986
Study_Hours	-0.05404	0.02780	-1.944	0.0519 .
Gender_Female	-0.37700	0.20864	-1.807	0.0708 .

# 5. Multivariate relationship of 80000-dataset

Xiaorui WANG

# Multivariate Relationship

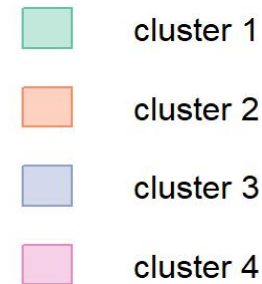

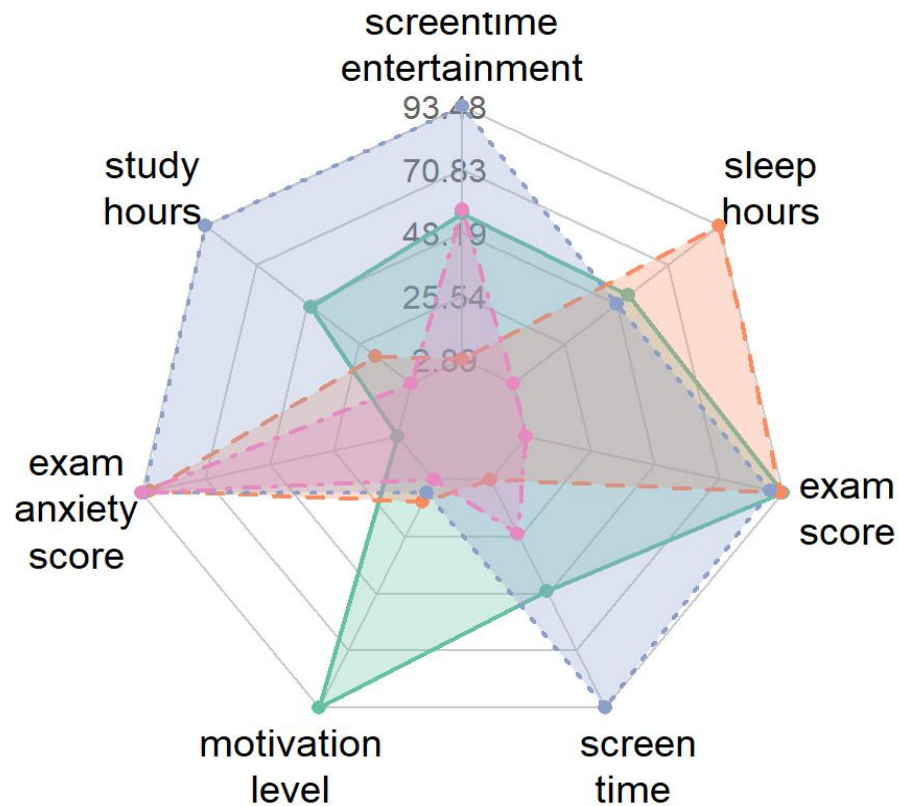

**Fig.16 Elbow method scatter diagram**  
Use elbow method to get the best k value

**Fig.17 Umap Clustering Plot**  
Use umap clustering method based on the k value

# Multivariate Relationship

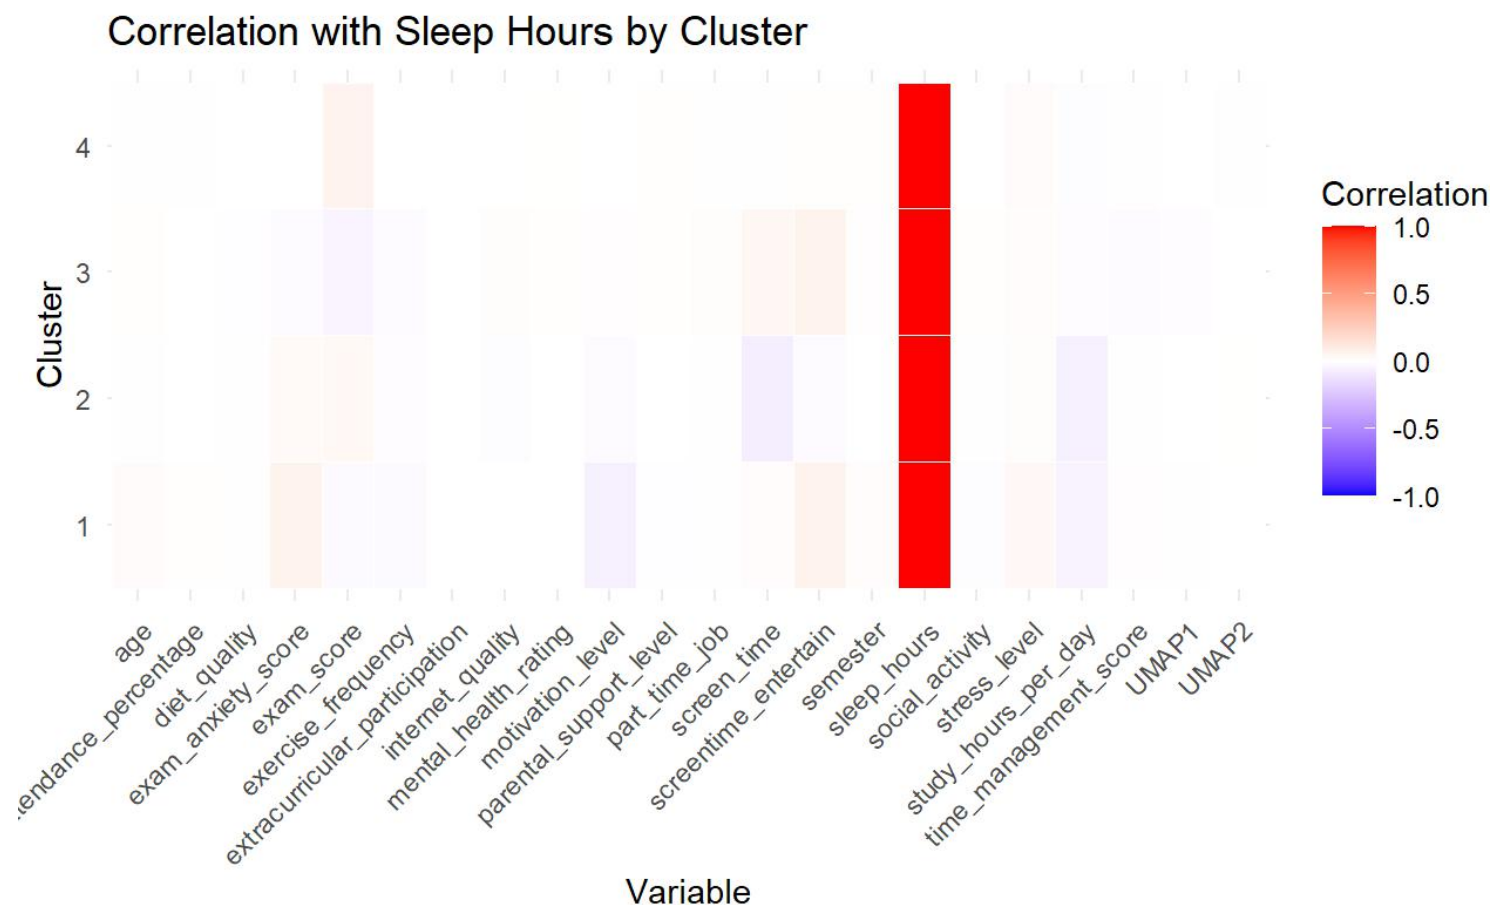

Radar chart top 6 features by cluster with sleep

- **Cluster 1: Hard-working**
- **Cluster 2: Good sleeping**
- **Cluster 3: Talent**
- **Cluster 4: Playful**

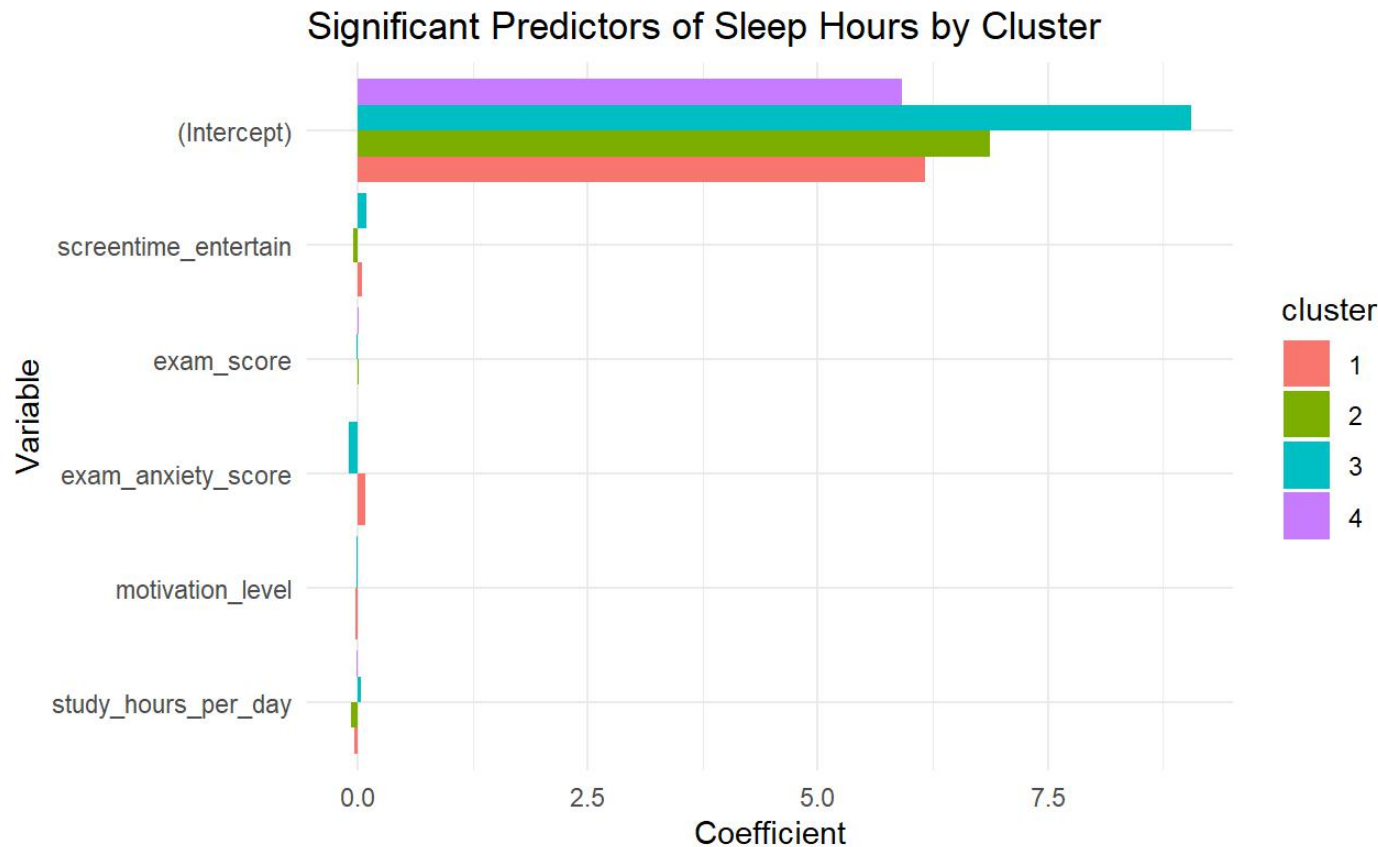

**Fig.18 Radar chart of 4 cluster**

# Multivariate Relationship

**Fig.19 Heatmap of sleep vs. others by clusters**

# Modeling by Cluster

The results showed that the influence of the variables was relatively weak, indicating that the driving factors of sleep behavior vary across groups.
